

Candidate AI - System Architecture Flow

High-level production data flow

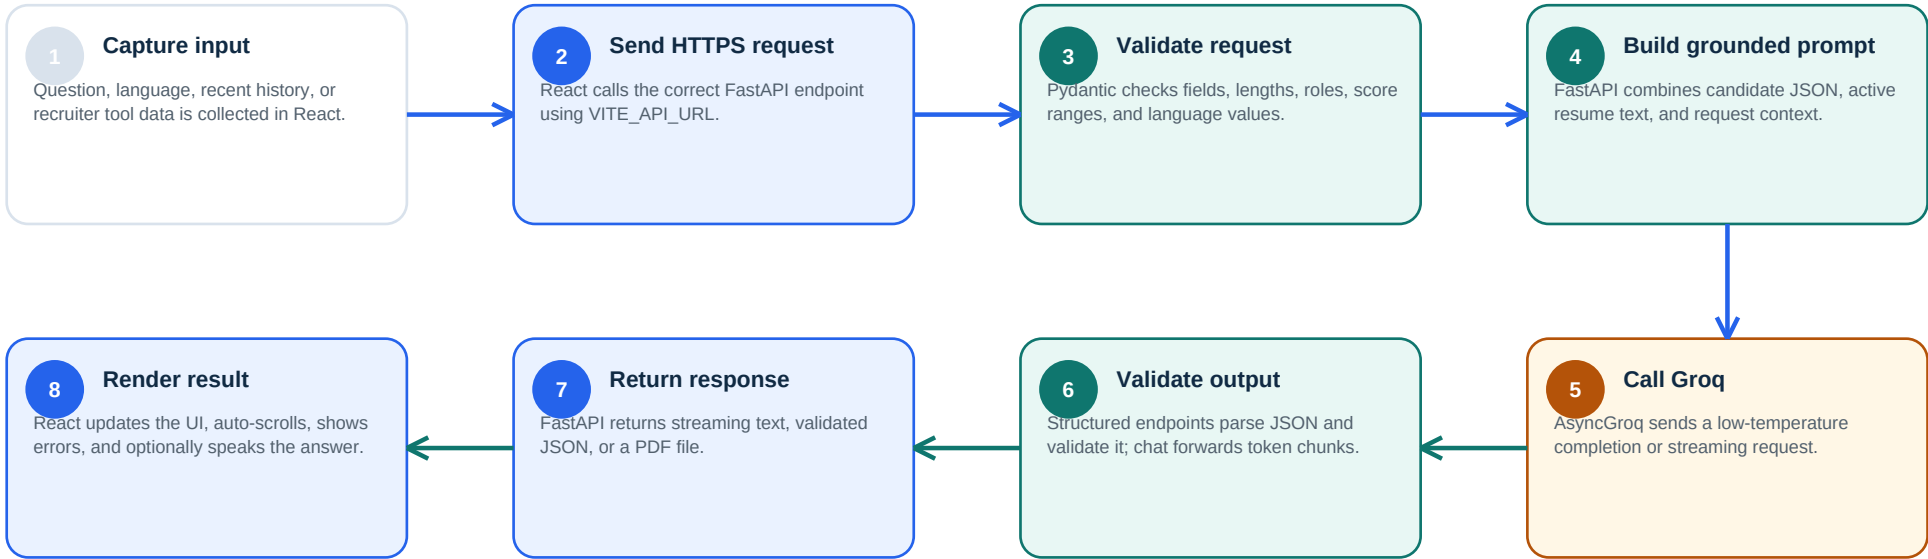

Response flow: Groq token -> FastAPI StreamingResponse -> browser stream reader -> live chat answer

Main rule

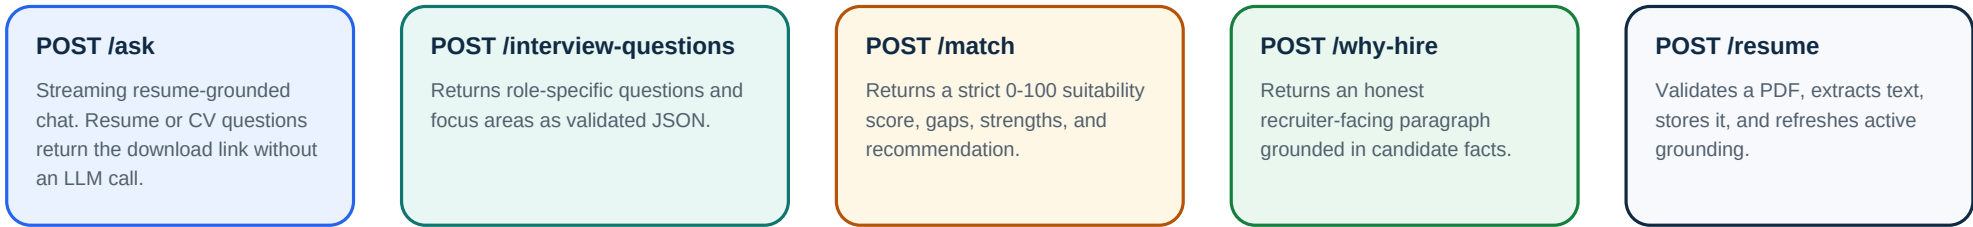

The model never receives an unrestricted prompt. FastAPI sends only the candidate profile, active resume text, recent bounded history, language instruction, and current request.

Chat and Recruiter Tool Flow

What happens after the user clicks Send

Endpoint selection

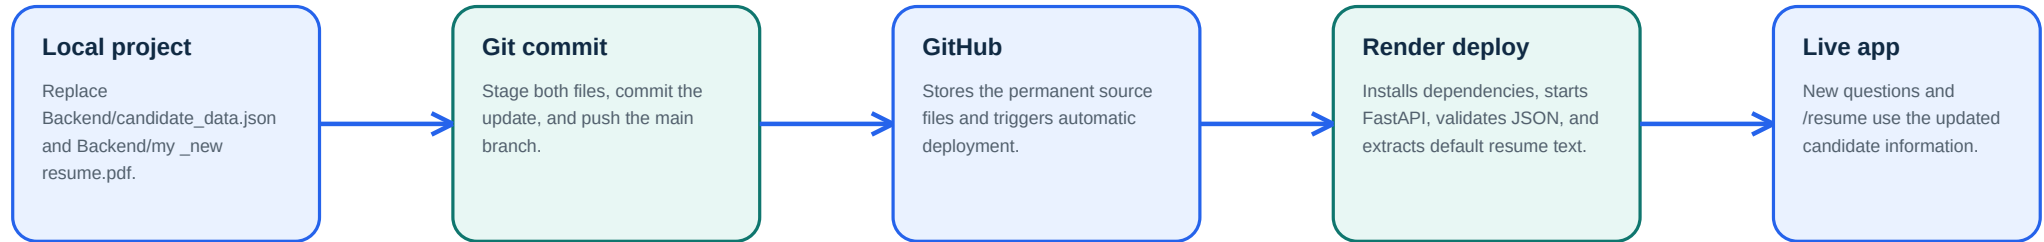

Failure handling
Invalid uploads return 400 or 413. Missing GROQ_API_KEY returns 503. Model or schema failures return 502. The frontend shows a retry-friendly message instead of exposing internal errors.

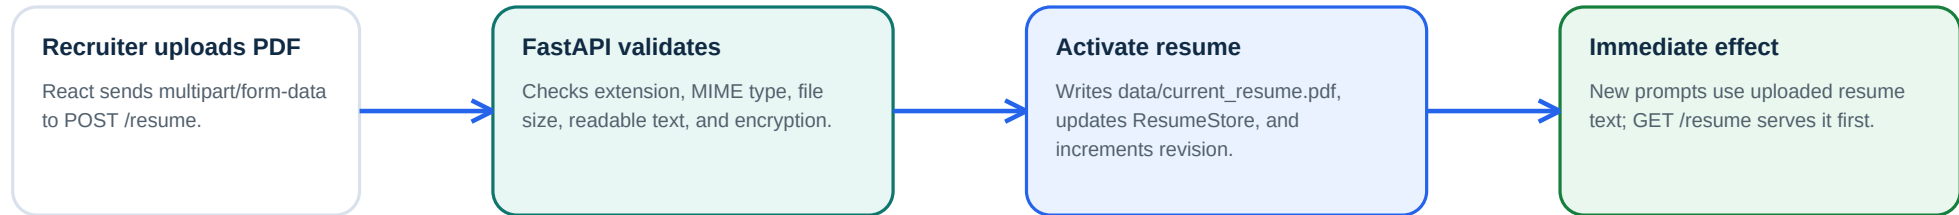

Resume Update and Deployment Flow

Permanent updates, temporary uploads, and production rollout

A. Permanent resume and candidate profile update

B. Temporary runtime resume upload

Important limitation

Render free runtime storage is ephemeral. A temporary upload can disappear after restart or redeploy. For a permanent update, commit the PDF and JSON to GitHub or move uploaded files to persistent object storage.

C. Required environment connection
